

Public Announcement

April 14, 2024

The Clay Springs Domestic Water Improvement District has applied for and received close to \$1,000,000.00 in loans with forgivable principal and a grant to make improvements to the water system. As part of the project, an engineering company will be using drones to fly over Clay Springs and map out the water system. This will probably happen within the next week or so.

Thank you for letting us serve the community and keep the water system in good operating condition.
